

Eemits supports Ashley Junior School with new two-way radio solution after their existing devices come to end-of-life

Ashley Junior School got in touch requesting a service on their current radios, but it became clear that they were reaching end-of-life in respect to radio and battery performance.

THE CHALLENGE

Ashley Junior School is a junior school based in New Milton, looking after a range of young people in the Hampshire area.

The challenge was to find brand new radios for the school after an original request for a service on their existing fleet.

After an initial investigation it became clear that their existing devices had reached their end-of-life as the radio and battery performance had dropped to a point where the devices no longer worked or held charge.

With this in mind we got to work on a new two-way radio solution - one that was licenced but still within their budget.

increased

THE SOLUTION

We installed Eemits ultra-smart digital two-way radio solution - TRBOCALL – a modular platform comprising the following:

HARDWARE

Ashley Junior School chose 30:

Hytera BP515 radio devices

The Benefits:

Ashley Junior School chose the Hytera BP515 device for use across the grounds.

The Hytera BP515 was the ideal solution for the school as it's a compact licenced radio that is easy to use and carry, and it is brand new to the market in comparison to the one they'd been using.

Part of Hytera's BP series of radios, the BP515 is an affordable digital device that has high-performance integrated voice and data capabilities.

And with Ashley Junior School looking for licenced radios that don't break the bank, the Hytera BP515 could more than cater for what they required.

Using a licenced radio is a big deal for any school as it means you won't experience any outside interference like you can with licence-free radios.

And with so many young people on site, it was important that the school had safe, secure, and discreet conversations at all times.

The BP515 comes equipped with clear and loud audio, expanded coverage, and high-energy battery performance.

THE RESULTS

Ashley Junior School now has a solution in place that gives them the right coverage, high-performance battery capabilities, and a range of budget-friendly licenced radios.

And by using licenced radio devices, they are reducing the risk of unnecessary safeguarding issues that can be caused by using the wrong type of communication device.

Eemits innovative modular platform TRBOCALL - a unique combination of hardware, bespoke software applications and digital features - together create an ultra-smart two-way radio system. Combined with unrivalled wide area network coverage, our customers have the flexibility to build their own system with all, or a combination of infrastructure, hardware, software service wrap, features and accessories that suite their individual business needs.
